

# AGRI SEED PROCESSING

The Gold Series® cartridge dust and fume collector combines enhanced performance with ease of service while cleaning the work environment of irritating dust and fumes.

Two GS20's on Seed Cleaning

The Gold Series® dust collector can be used in a variety of Agricultural Seed Processing dust collection applications such as corn shellers, seed cleaning, seed preparation, seed coating, seed hybrid development and general facility ventilation. The vertical cartridge design works better and Farr APC is one of the few companies that can handle seed processing well.

Application Focus

**AGRICULTURAL SEED PROCESSING**

SAFE AIR FOR A SAFE WORK ENVIRONMENT

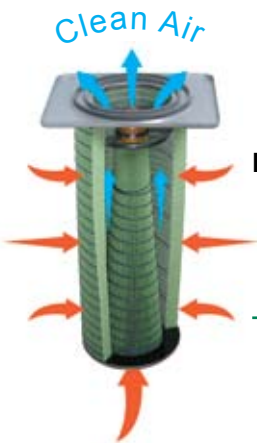

Multiple GS Dust Collectors on Corn Processing

With its cross flow inlet design and vertical pleated cartridges, the Gold Series® keeps material like bee’s wings and corn silks from bridging. In extreme cases, nylon overbags can be installed on the cartridges to prevent bridging as well. With installations on every continent and various applications, we can customize a system to keep your seed plant clean.

### Safety Considerations

Explosion vents manufactured in accordance with NFPA standards should be used on all flammable applications. The collector should be located outside whenever possible or near an exterior wall with the explosion vents ducted per NFPA standards outside the building.

#### Key benefits:

- High filtration efficiency
- Excellent energy performance
- Long element life

### Gold Cone™ Cartridge

Camfil Farr HemiPleat® cartridges have an expanded capacity due to the patented inner Gold Cone™. This inner cone increases media area and provides uniform dispersion of back-pulsed air. It also opens up more useable space for air flow in the filter.

### Agri Seed Processing Application Focus Users

Monsanto  
Pioneer Hi-Bred  
Indiana Small Plots  
Trisler Seed Farms

Syngenta  
Remington Seeds  
Kruger Seed  
Prarie Engineering

Mycogen  
Renze Hybrid Seed Corn Co.  
AgReliant
